

Water temperature at a glance

The Legionella control temperatures: confirm against your risk assessment and HSG274.

The growth zone

The figures

- Store hot water at 60 °C or above
- Hot reaches 50 °C (55 °C healthcare) within ~1 min at the tap
- Cold stays below 20 °C within ~2 min
- Legionella multiplies fastest 20–45 °C

Every month

- Check sentinel hot & cold outlets
- Record the readings
- Investigate anything out of range: do not just tick it
